

INTU FR BRICK

Intumescent fire stop brick

TDS Technical Data Sheet

CE

INTUSEAL®
passive fire protection manufacturer

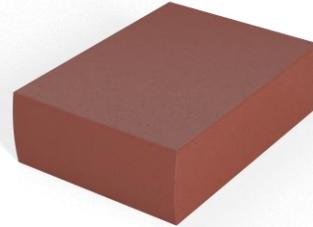

EOTA

www.intuseal.com

→ PRODUCT DESCRIPTION

Fire protection block **INTU FR BRICK** is made of intumescent polyurethane foam with halogen-free fire safety additives. Intumescent foam close the hole during fire, preventing the spread of fire and smoke.

- fire resistance class up to **EI 120**
- mixed penetration seal
- to medium-sized and large fire protection penetration seals
- penetration seals with frequently changing pass-through installations
- for use in walls and floors

→ APPLICATION

The **INTU FR BRICK** intumescent fire stop brick is intended to be used as mixed penetration seal to temporarily or permanently reinstate the fire resistance performance of flexible wall, rigid wall and rigid floor construction where they have been provided, with apertures which are penetrated by various cables, waveguides, conduits / tubes, metal pipes, plastic pipes and cable support constructions (perforated or non-perforated steel cable trays and steel ladders).

Rigid walls:

The wall must be 100 mm minimum thickness. Must have concrete, aerated concrete, cellular concrete, reinforced concrete or masonry structure, with min. density $\rho \geq 450 \text{ kg/m}^3$.

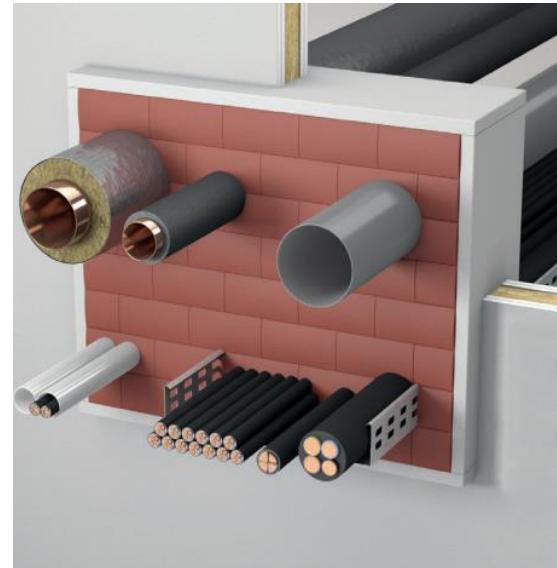

Rigid floors:

The floor must be 150 mm minimum thickness. Must have concrete, aerated concrete, cellular concrete, reinforced concrete or masonry structure, with min. density $\rho \geq 450 \text{ kg/m}^3$.

Flexible walls:

The wall must be minimum thickness 94 mm. Must have steel or timbers profile structure covered on both sides with minimum 2 layers of boards with minimum thickness 12,5 mm or minimum one layer of boards (minimum thickness 25 mm) with classification.

- For timber stud walls there shall be a minimum distance of 100 mm of the penetration seal to any timber stud. This cavity between the penetration seal and the timber stud has to be closed with insulation.

→ AVAILABILITY

Product	Type	Unit	Pallet (pcs)	Article number
INTU FR BRICK	200x144x60 mm	BOX (18pcs)	450 (25xBOX)	INFBRK

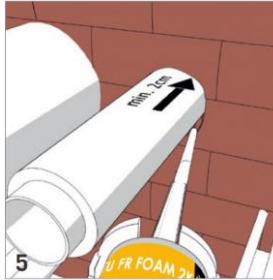

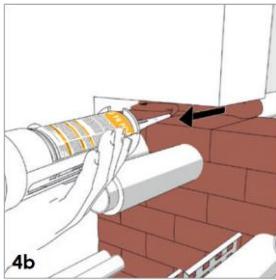

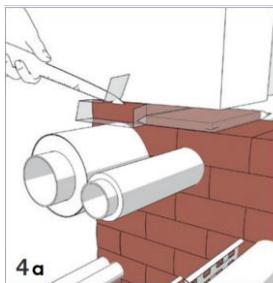

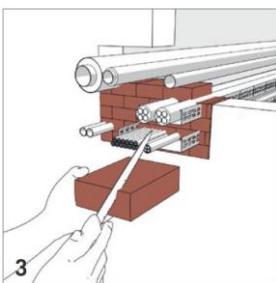

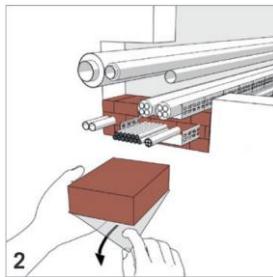

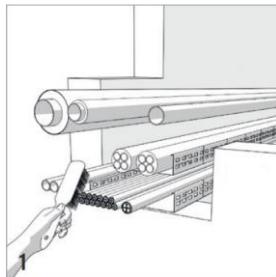

→ TRANSPORT AND STORAGE

Store in dry and cool conditions at temperatures between + 5°C and + 25°C.

→ COMPLIANCE

- ETA-10/0431, OIB
- ETA-11/0206, OIB
- EC Certificate of Conformity 0761-CPD-0187
- EC Certificate of Conformity 0761-CPD-0208
- DoPZZ230-20180701
- TDS
- SDS

→ INSTALLATION METHOD

1. Clean the component opening.
2. Remove the protective foil of the **INTU FR BRICK** and install them in layers (like in a brick bond in masonry, i.e. layer-by-layer offset of the vertical butt joints) so that they fit tightly in the component opening.

3. In the area of penetrating elements, cut the **INTU FR BRICK** to the required size.

Narrow residual openings can be sealed with:

- 4a. The **INTU FR BRICK** vacuum packed. Place the **INTU FR BRICK** vacuum packed unopened in the opening. After cutting open the foil the **INTU FR BRICK** expands to the standard size. The foil can remain inside the penetration seal, however it must be removed on both sides so that it is flush with the surface of the penetration seal.
- 4b. The **INTU FR FOAM 2K**. The fill depth must equal the minimum seal thickness. The maximum area that may be filled with **INTU FR FOAM 2K** is 450 mm x 500 mm (width x height).

5. Interstices between cables and open joints must be filled with fire protection sealant e.g. **INTU FR MASTIC** 20 mm deep on both sides. But joints and horizontal joints between **INTU FR BRICK** and

→ TECHNICAL DATA

Table 1 Properties of the **INTU FR BRICK** fire protection block

Colour	Red / brown*
Shelf life	12 months in unopened packaging at a temperature between 5°C and 30°C
Transportation storage temp.	+5 °C to +30 °C (store dry and dustfree in the original packaging)
Application temperature	+15 °C to +30 °C (optimally +20 °C tot +25 °C)
Temperature resistance	-20 °C to +80 °C
Cutability	Direct
VOC	< 2 µg/m³
Density	$\rho = 240 \text{ kg/m}^3 - 300 \text{ kg/m}^3$
Thermal conductivity (λ)	0,103 W/(m*K)
Expansion pressure	No expansion pressure measurable
Expansion factor ¹⁾	from 1.6 x to 4.5 x
Category of use ²⁾	Type Z ₁ in accordance with EAD 350454-00-1104
Recoatable ³⁾	Yes
Air permeability	<ul style="list-style-type: none"> Q50 ≤ 0.82 m³/(h*m²) / Q600 = 6.61 m³/(h*m²) (Tested measurement: 550 x 355 x 200 mm tested without penetrations) Q50 = 1.12 m³/(h*m²)/Q600=7.65 m³/(h*m²)

Table 2 The opening size of fire penetration seal

Partition		Penetration seal parameters			
Class minutes		El 60	El 120	Height H [mm]	
Type	Thick. [mm]	Width W [mm]			
		For seal thick. b=144mm	For seal thick. b=200mm		
Rigid wall	$b \geq 100$	600		1000	
		1000		600	
Partition		Penetration seal parameters			
Rigid floor	$b \geq 150$	unlimited	unlimited	≤ 375	
		6000	unlimited	400	
		2250	4800	450	
		1000	1300	600

Partition		Penetration seal parameters			
Flexible wall	$b \geq 94$	600		1000	
		1000		600	

	(Tested measurement: 560 x 360 x 144 mm tested without penetrations) in accordance with test standard EN 1026
Resistance to static pressure differences	<ul style="list-style-type: none"> Pmax = 3700 Pa (Test part dimensions 550 x 355 x 200 mm, tested without penetration) Pmax = 2100 Pa (Test part dimensions 560 x 360 x 144 mm, tested without penetration) in accordance with test standard EN 12211
Acoustic properties	RW 45 dB (test dimension 350 x 350 x 144 mm) RW 49 dB (test dimension 360 x 360 x 200 mm)
Fire class	E in accordance with EN 13501-1
Approvals	ETA-10/0431 and ETA-11/0206
Function retention	10 years

¹⁾ Expansion factor tested on samples at 450 °C for 25 minutes with overload. The expansion factor is a laboratory characteristic value.

The expansion factor in an installed state depends on the existing preconditions.

²⁾ Permissible environmental conditions. Conduit seal for use in conditions with ≥ 85% RH, protected from temperatures below 0 °C, and without exposure to rain and/or UV.

³⁾ Influence of finishing materials and chemicals the following paints and occasional brief influences from chemicals will not change the fire protection properties:

Coating materials : Dispersion paint, alkyd paint, polyurethane acrylic paint, epoxy resin paint, silicone

Solvent/oil : Butyl acetate, butanol, trichloroethylene, xylene, acetone, turpentine

Gaseous chemicals : Brief storage with concentrated ammonium hydroxide solution

*Environmental conditions with high humidity levels and/or some coating materials and chemicals may change the color or limit colour changes.

► FIRE RESISTANCE CLASSIFICATION

Table 3 Fire resistance classification for flexible walls / rigid walls / rigid floors for INTU FR BRICK

Type of penetrating element	Fire resistance classification			
CONDUITS / TUBES	Pipe wall thickness	Foam injection depth b ≥ 144 mm	Foam injection depth b ≥ 200 mm	
Steel conduits tubes up to a max. outer diameter (with / without cables):	Ø ≤ 16 mm	≥ 1,5 mm	wall: EI 90 – U/C; EI 120 – U/C floor: EI 90 – U/C; 90 – U/C EI 120 – U/C; E 120 – U/C EI 120 – U/C E 120 – U/C wall: EI 90 – U/C; E 120 – U/C floor: EI 90 – U/C; 90 – U/C wall: EI 90 – U/C; E 120 – U/C floor: EI 90 – U/C; 90 – U/C	
Plastic conduits up to:	Ø ≤ 63 mm	1,0 – 3,0 mm		
Bundles consisting of plastic conduits with / without cables:	Ø _{BUNDLE} ≤ 80 mm Ø _{CONDUIT} ≤ 40 mm			
Speed•pipe ® up to:	Ø ≤ 12 mm	0,75 - 2,0 mm		
Bundles consisting of speed•pipe® with / without optical fibre cables:	Ø _{BUNDLE} ≤ 80 mm Ø _{PIPE} ≤ 12 mm			
NON-INSULATED METAL PIPES	Pipe wall thickness	Foam injection depth b ≥ 144 mm	Foam injection depth b ≥ 200 mm	
Copper pipes up to a max. outer diameter:	Ø ≤ 18 mm	1,0 – 14,2 mm	EI 60 – C/U E 120 – C/U	
Steel pipes up to a max. outer diameter:	Ø ≤ 35 mm	1,0 – 14,2 mm		
PLASTIC PIPES / TUBES	Pipe wall thickness	Foam injection depth b ≥ 144 mm	Foam injection depth b ≥ 200 mm	
Plastic pipes up to a max. outer diameter:	Ø ≤ 50 mm	1,8 – 5,6 mm	EI 60 – U/C E 60 – U/C

Support for penetrations through Rigid Floors ≥ 150 mm

Top view:
Installation of glass fabric or steel
element **for $b = 144$ mm**

In case of installation in floor openings free
areas (without any elements penetrating
the penetration seal) have to be
supported with steel element (minimum
width of 40 mm and minimum thickness of
2 mm) on the bottom side of the floor.
Alternatively it is possible to install a glass
fabric according to the ETA-holder's
installation instruction every 180 mm
between INTU FR BRICK (width of glass
fabric $\geq b$).

Top view:
Installation of steel elements
for $b = 200$ mm

In case of installation in floor openings free
areas (without any elements penetrating
the penetration seal) have to be
supported with steel element (minimum
width of 40 mm and minimum thickness of
2 mm) on the bottom side of the floor.
Alternatively it is possible to install a glass
fabric according to the ETA-holder's
installation instruction every 180 mm
between INTU FR BRICK (width of glass
fabric $\geq b$).
